

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Currently Amended) An electrocardiogram (ECG) chart data-generating device for generating chart data to be used to display charts based on measured ECG data, comprising:
 - means for generating feature value data indicating an ECG feature value with regard to each group where the plural leads of ECG chart data are grouped according to each portion of the heart; and
 - means for generating chart data corresponded to each portion of the heart, wherein the chart data is to be used to display a chart in which the feature value of each group represented by the feature value data is displayed; and~~based on the feature value data, wherein the chart data is to be used to display a chart that relates the feature value to each portion of the heart,~~
wherein the chart data is displayed in a chart in which each feature value is displayed correlated with the corresponding portion of the heart.
2. (Currently Amended) A computer readable medium having stored thereon the computer program for an ECG chart data-generating device that generates chart data to be used to display charts based on measured ECG data, wherein the program is implemented in a computer and capable of causing the computer to perform:
 - means for generating feature value data indicating an ECG feature value with regard to each group where the plural leads of ECG chart data are grouped according to each portion of the heart; and
 - means for generating chart data corresponded to each portion of the heart, wherein the chart data is to be used to display a chart in which the feature value of each group represented by the feature value data is displayed, and~~based on the feature value data, wherein the chart data is to be used to display a chart that relates the feature value to each portion of the heart,~~
wherein the chart data is displayed in a chart in which each feature value is displayed correlated with the corresponding portion of the heart.
- 3-5. (Canceled)
6. (Currently Amended) The device according to claim 1, further comprising:

means for controlling display ~~control~~ for varying the display style of the feature value when the feature value is in an abnormal range.

7. (Canceled)

8. (Previously Presented) The device according to claim 6, wherein the display controlling means or means for displaying the abnormal value is to hold display of the feature value constant even when the feature value varies within a normal range.

9. (Previously Presented) The device according to claim 1, wherein the chart data is displayed in a chart that relates the feature value to each portion of the heart including at least left portion of the heart, right portion of the heart, bottom portion of the heart, front portion of the heart, or inner portion of the heart.

10. (Currently Amended) The device ~~according to as in one of~~ claim 1, wherein the feature value data is based on the constituent elements of an ECG including at least P wave, Q wave, R wave, S wave, ST segment, or T wave~~chart data is to be used to display a chart that relates the feature value to each portion of the heart including at least left portion of the heart, right portion of the heart, bottom portion of the heart, front portion of the heart, or inner portion of the heart.~~

11. (Previously Presented) The device according to claim 10, wherein the chart data is displayed in the feature value in a radar chart form.

12. (Previously Presented) The device as in one of claim 1, wherein the chart data is displayed in the feature value on a heart image.

13. (Canceled)

14. (Currently Amended) An ECG chart data-generating device for generating chart data based on measured ECG data comprising:

a central processing unit (CPU) of the ECG chart data-generating device adapted to generate

feature value data indicating an ECG feature value with regard to each group where the plural leads of ECG chart data are grouped according to each portion of the heart; and chart data based on the feature value data, wherein the chart data is to be used to display a chart that relates the feature value to each portion of the heart.

chart data corresponded to each portion of the heart, wherein the chart data is to be used to display a chart in which the feature value of each group represented by the feature value data is displayed;

wherein the chart data is displayed in a chart in which each feature value is displayed correlated with the corresponding portion of the heart.

15-21. (Canceled)
